Mr. Don LaCount
Carow Land Surveying
604 North Richmond Street
Appleton, Wisconsin 54911

Dear Mr. LaCount:

In response to our March 11, 1974 phone conversation, I am enclosing the following information:

1. The September 24, 1973 letter from myself to Mr. Lehrer.

2. Two copies of the Solid Waste Management Rules.

3. A copy of Mr. Lehrer's request for a permit to change the course of a navigable stream and Mr. Fassbender's request for additional information.

In our conversation, you mentioned a November 21, 1973 letter from Mr. Lehrer. I assume you are referring to the November 21st date referred to in Mr. Gleb's letter. The November 21st correspondence referred to was a meeting of the landfill, not a letter.

If I can be of further assistance, feel free to call.

Very truly yours,

Larry

SUBJECT: Late Engineering Plans

I have not yet received the required engineering plans from Lehrer Sanitary Service and the City of Appleton. Your letters to each entity requested the plans by January 30, 1974. Have they been sent to your office? If not, would you send them a reminder letter. I'm holding Lehrer's license application until the plans are submitted.

RECEIVED DNR

NOV 30 1973

Lake Mich. Dist.

Dear Mr. Lehrer:

Pursuant to our discussion on November 21, 1973, at your landfill site located in Section 21 and 22, T21N, R18E, Town of Buchanon, Outagamie County, Wisconsin, and after careful consideration of plans submitted by you in July of 1970, and some major changes in relation to this plan, the Department of Natural Resources has determined the following information to be necessary before relicensing of your facility can be completed for the 1973-1974 period.

1. A plot plan showing contours which exist at the site presently, proposed sequence of filling operations, final contours, 300' setback from stream, drainage considerations in trenches, trenching plans and depths, separate sludge areas, and any other pertinent details. Cross sections shall be included showing MAXIMUM ~~minimum~~ fill elevations, final proposed contours, bottom slopes in trenches for drainage, and other pertinent details.

2. Staking of the 300' setback as required must be done in the field and that area within 300' abandoned in accordance with NR 151.12(10), Wis. Administrative Code.

3. A report which shall include; population served by the site, industries using the site, final use of site, operating plan, and other pertinent details including those mentioned in Mr. Boehms September 24, 1973, letter to you.

Things to be taken into account should be the straightening of the stream as you have proposed, final use as you stated on November 21, separate waste areas, and fill progression plans. Since portions of the plan may be dependent on your proposal to straighten portions of the stream, the above data, which is to be submitted by a qualified professional person, shall be somewhat time dependent on the stream straightening proposal acceptance, but shall be submitted no later than January 30, 1974.

If you have any questions, feel free to contact me at 266-0468 in Madison, Wisconsin.

Very truly yours,
Bureau of Air Pollution Control
and Solid Waste Disposal
